PROFILE
Your story

Prepared for people who want to use PROJORA confidently without needing a technical background.

Live website: projora-library.netlify.app • Version 1.0 • 2 November 2026

Welcome to your project library

This manual explains how to use PROJORA in everyday language. You do not need to know how websites are built. If you can use a browser, fill in a form, and upload a picture, you can follow this guide.

What this guide is based on. The live public pages were checked on 2 November 2026. The visible site confirms the main navigation, account creation and login pages, the Discover page, dark-mode control, and language/translation controls. Some signed-in screens depend on an authenticated account and can change as the product evolves. Where an exact button label cannot be verified publicly, the guide describes the task and asks you to use the closest matching control.

How to use this guide

- **First-time user:** read Chapters 1–3, then complete the setup checklist.
- **Ready to add work:** jump to Projects and Catalogues.
- **Preparing to share publicly:** read Public Profiles and Privacy carefully.
- **Introducing PROJORA:** use the presentation script near the end.

Contents

1. Introduction to PROJORA
2. Getting started: account, email and login
3. Dashboard navigation
4. Projects: create, edit, illustrate and share
5. Catalogues: organize projects into collections
6. Public profiles: present your professional story
7. Using the five-language translation controls
8. Account settings, themes and account safety
9. Practical examples and everyday workflows
10. Troubleshooting and good habits
11. Introducing PROJORA to the public
12. Quick reference checklist

1. Introduction to PROJORA

PROJORA is a professional project library: a place to organize work you have completed, work you are developing, and ideas you may pursue in the future. It helps turn scattered project links, images, descriptions, and achievements into a clearer story that others can explore.

Who is PROJORA for?

• Professionals who want to show examples of their work.

• Students and learners collecting assignments, experiments, and portfolio projects.

• Freelancers and consultants presenting work for different clients or services.

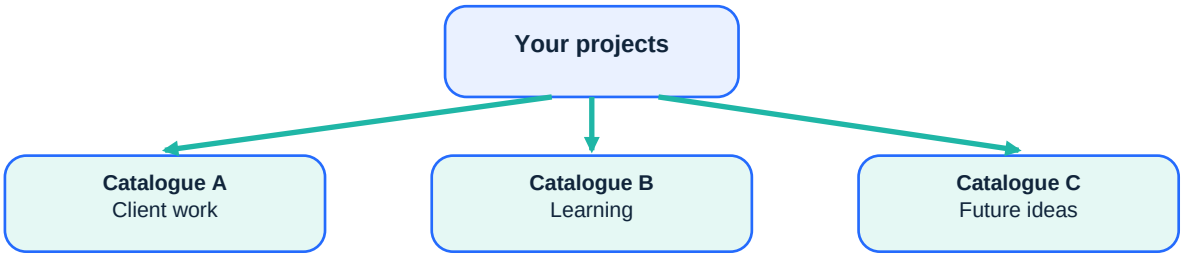

• Creators and entrepreneurs tracking current projects and future ventures.

• Anyone who wants one organized home for projects that might otherwise be spread across documents, folders, and websites.

The problems it helps solve

Before	With PROJORA
Project details are scattered across links and files.	A project library keeps descriptions, links and project records together.
Different types of work are mixed together.	Catalogues help group work by purpose, client, skill or future direction.
People cannot easily understand what you contributed.	Project descriptions can explain the goal, your role, the result and supporting links.
Sharing everything feels risky.	Project visibility and profile contact-sharing controls help you share selectively.

A simple mental model

One project may be organized into more than one catalogue.

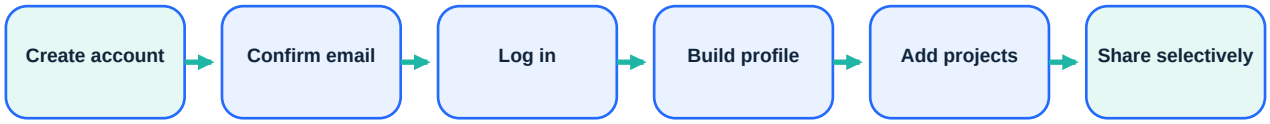

Think of PROJORA as a bookshelf. Each project is a book; catalogues are shelves you create for different themes; your profile is the introduction to the person who made the work. You decide what to put on display.

Important distinction: PROJORA supports project organization and presentation. It is not a guarantee of employment, client leads, sales, or professional recognition. The value comes from the quality and clarity of the work you choose to present.

2. Getting started

Before you begin, use a current browser such as Chrome, Edge, Firefox or Safari, and have access to the email inbox you plan to register with.

Create your account

1. Open projora-library.netlify.app.
2. Choose **Create account** in the top navigation (or the homepage button inviting you to create your library).
3. Enter your **full professional name** and **email address**. The live registration page states that the password must contain at least 10 characters.
4. Add your phone number, country, and the reason you are using PROJORA if you wish. These fields are shown as optional on the registration page.
5. Select **Create account** and follow any confirmation message shown on the screen.

Confirm your email

PROJORA asks new users to confirm their email to finish signing up. Open the inbox for the email address you entered and look for a confirmation message. Check Spam/Junk if it is missing. Open the message and follow its confirmation link. If the link has expired or never arrived, return to Log in and use **Resend confirmation email** if available.

Log in

1. Select **Log in**. 2. Enter the same email address used at registration. 3. Enter your password. 4. Select **Log in**. If successful, open Dashboard or Profile from the navigation.

Recover a forgotten password

1. On the Log in page, choose **Forgot your password?**. 2. Enter your account email if requested. 3. Check your inbox and Spam/Junk folder. 4. Follow the reset link and choose a new password. 5. Return to Log in and use the new password. Never send your password to another person, including someone claiming to provide support.

If the confirmation or reset email does not arrive

• Check that you typed the email address correctly.

• Search your inbox for “PROJORA” and check Spam/Junk/Promotions.

• Wait a few minutes before requesting another email.

• Use the resend option rather than creating multiple accounts with slightly different addresses.

3. Dashboard navigation

The dashboard is your private work area after you sign in. The public website navigation currently shows Discover, Dashboard, Profile, Log in and Create account. The dark-mode and page-language controls are also visible on public pages.

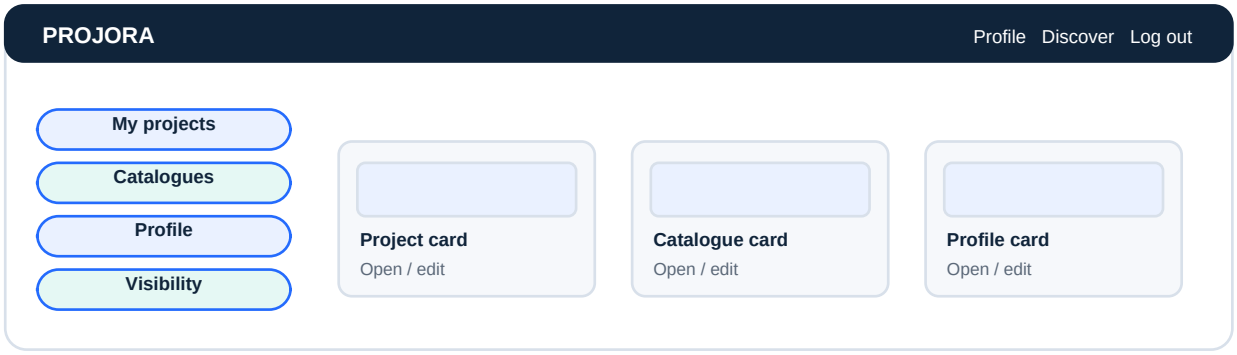

Illustration: a simplified map of common areas—not a screenshot and not a promise that every card will look exactly like this.

Main navigation, in plain language

Area	What it is for	When to use it
Discover	Browse projects that members have chosen to make public.	Explore examples or check how public work appears.
Dashboard	Your signed-in workspace for managing your projects and catalogues.	Start here when organizing your own work.
Profile	Your professional identity and public-facing profile information.	Add a bio, review profile details and privacy choices.
Log in / Create account	Sign in to an existing account or register a new one.	Use when you are signed out.
Dark / theme control	Changes the site's visual appearance.	Use the mode that is more comfortable to read.
Page language / Translate page	Lets you choose a language and request a page translation.	Use if you prefer another supported language.

How to recognize a button

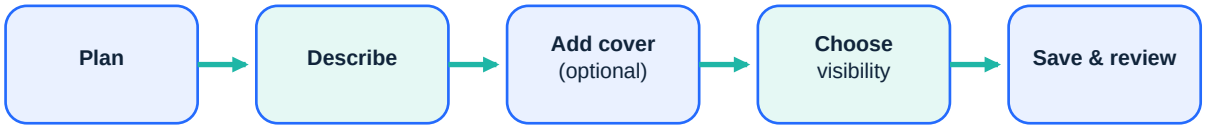

Buttons usually start an action (for example, Create account or Log in). Links move you to another page (for example, Discover). A form field is a box where you type or select information. When you change something, look for a Save, Update, Create or Submit button and wait for a success message before leaving the page.

If Dashboard or Profile sends you to Log in, you are probably signed out. Sign in first, then open the page again. This is normal protection for private account areas.

4. Projects: create, edit, illustrate and share

A project is one item in your library. It could be a website, business initiative, design, research task, client engagement, course project, financial dashboard, or a future idea. A useful project entry explains not only what it is, but also why it matters and what your contribution was.

Before creating a project: collect the project name, a short summary, your role or contribution, category or type if requested, relevant dates or outcomes, and a link to the live work if one exists. Do not publish confidential client information or work you do not have permission to share.

Create a project

1. Sign in and open Dashboard. 2. Find the project area and choose the action to add or create a project. 3. Complete the form fields shown. 4. Write a clear title and a short description. 5. Add any requested details such as category, project link, role, timeline or outcome. 6. Upload a cover image if the form offers that field. 7. Choose the visibility option carefully. 8. Save/create the project and confirm that it appears in your library.

Writing a strong project description

- **Purpose:** What problem or need was this project addressing?
- **Your role:** What did you personally design, build, coordinate, research or deliver?
- **Process:** What important steps, methods or tools did you use?
- **Outcome:** What changed or what was produced? Use numbers only when they are accurate.
- **Evidence:** Add a working project link, public demo or suitable image when you have permission.

Example description

“Designed a simple finance dashboard to help a small team review monthly income and expenses. My contribution included mapping the key metrics, organizing the dashboard layout and documenting the reporting workflow. The project focused on making the monthly review easier to understand.”

Upload or change a cover image

If the project form shows a cover-image upload control, select it and choose an image file from your computer. Wait for the upload or preview to finish, then save the project. To replace a cover, open the project editing screen, choose the replacement image, check the preview, and save again. If a remove option is offered, use it only when you really want to remove the current image.

- Choose a clear image that relates directly to the project.
- Use an image you own or have permission to use.
- Avoid images containing private data, passwords, client records or personal information.
- If an image fails, try a smaller JPG, PNG or WebP file if accepted by the form.

Edit a project

Open the project from your dashboard, choose its edit action, update the relevant fields and save. Reopen the project afterward to confirm the changes. If you cannot see an edit action, confirm that you are signed in to the account that owns the project.

Manage visibility and share a project

A public project is intended to be discoverable by other people and may appear on Discover or your public profile. A private project should remain out of public discovery. Before sharing, check the visibility setting and then open the public view in a separate browser tab or signed-out window to see what visitors can actually see.

To share: open the public project or profile view and copy its web address from the browser address bar, if the project is public and has a shareable page. Send that link to the intended recipient. Never assume a private project becomes public simply because you send someone a link.

If you paste an existing project website link into a project-creation form, use any import/fetch option only if it is visibly offered in your current interface. Review the imported title, image and description before saving; automatically collected details can be incomplete or inaccurate.

5. Catalogues: organize projects into collections

A catalogue is a named collection that helps people browse a group of related projects. Think of catalogues as shelves in a library. You might create one for client work, one for finance projects, one for learning, and one for future ventures.

Useful catalogue ideas

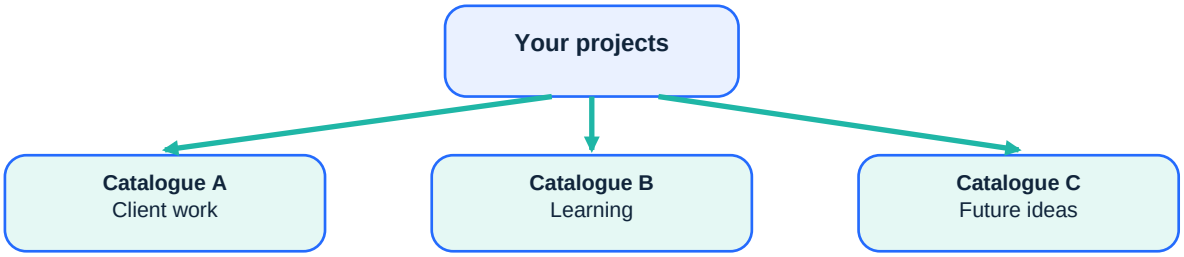

Catalogue name	What belongs in it
Featured Projects	Your strongest examples that best represent your skills.
Client Work	Work you have permission to discuss publicly for clients.
Finance & Analytics	Dashboards, reporting workflows and analysis projects.
Learning & Experiments	Practice projects, prototypes and new techniques.
Future Ventures	Ideas or planned projects, clearly marked as planned rather than completed.

Create a catalogue

1. Open the catalogue section in your signed-in dashboard. 2. Choose the action to create/add a catalogue. 3. Enter a short, meaningful name and any description or cover image fields shown. 4. Save. 5. Check that the catalogue appears in your list.

Assign projects to a catalogue

Open a project or its assignment controls. Select the catalogue or catalogues that fit the project, then save the changes. If multiple catalogues can be selected, a project may belong to more than one collection. Reopen the assignment controls after saving to confirm that the selected catalogues remain selected.

One project may be organized into more than one catalogue.

Filter and find projects

If the dashboard offers search, category filters or catalogue filters, use them to narrow the list. Start with one filter at a time. To see all projects again, clear the search text or reset the selected filter. The exact filter controls can vary with the current screen size.

Delete a catalogue safely

Open the catalogue's management controls and choose Delete only when you are certain. Read any confirmation message before approving. A catalogue is an organizational collection; deleting it may remove the collection or its project assignments, not necessarily the projects themselves. Confirm the warning in the interface rather than assuming what will happen. If you are unsure, rename or leave the catalogue in place until you have checked.

Good catalogue habits

• Use names that a visitor can understand without explanation.

- Avoid creating many catalogues with overlapping or nearly identical names.
- Keep private projects out of public-facing collections where possible.
- Review assignments after moving a project between catalogues.

6. Public profiles: present your professional story

Your profile is the introduction to you. It gives visitors context for the projects they see and can help them understand your professional focus. PROJORA's public profile controls are designed to let you choose which optional contact details appear publicly.

Set up your profile

1. Sign in and open Profile. 2. Complete the fields available, such as your professional name, short biography/about-me text, country or profile photo if offered. 3. Explain what you do and the kinds of work you want people to understand. 4. Review optional contact-sharing settings. 5. Save changes. 6. Open the public profile view and check how it appears to a visitor.

A simple profile formula

Who you are + **what you do** + **what kind of work you want to show** + **what a visitor should do next**.

Example bio

“I am a project-focused professional interested in building practical digital tools and clear reporting experiences. My library brings together selected work, experiments and projects in progress. Explore the catalogues to see the problems I work on and the outcomes I aim to deliver.”

Profile photo and presentation

• Use a clear, professional image if you choose to upload one.

• Use a concise biography and check spelling before saving.

• Keep your public name consistent with how you want colleagues or clients to recognize you.

• Do not publish private home addresses, personal documents or details you would not want strangers to see.

Contact privacy: check each setting

If the profile offers separate controls for contact email, phone number or country, each control may work independently. Turn on only the fields you are comfortable showing publicly. After saving, inspect the public profile while signed out or in a private/incognito browser window. A field that is hidden from the public profile should not be visible to visitors.

Public profile vs. private account area

Your public profile is the page a visitor can view. Your profile editor is the signed-in area where you manage information. If you are signed out and the editor redirects you to Log in, sign in first. When sharing your profile, copy the address of the public profile page—not a private dashboard or editing page.

7. Five-language translation

The public interface currently shows a Page language selector and a Translate page button. The requested supported languages for this guide are English, French, Spanish, Chinese and German.

English • French • Spanish • Chinese • German

How to request a translation

1. Find **Page language** near the top of the page. 2. Open the selector. 3. Choose English, French, Spanish, Chinese or German. 4. Select **Translate page**. 5. Wait for the page text to update. 6. Review important words—especially project names, technical terms, dates and contact details—before sharing the page.

What translation means in practice

• The control is for translating the page you are viewing; it does not necessarily translate every item a user has written or every page in the site automatically.

• A project title, company name, product name or technical term may be best left unchanged.

• If your project description needs to be understood by international visitors, consider writing a separate, reviewed version in the relevant language if the project form supports it.

• Machine translation can make mistakes. For a business proposal, client commitment or legal statement, ask a fluent speaker to review the wording.

A useful multilingual approach

Language	Practical check
English	Use as the source text if it is your strongest working language.
French	Check professional terms and accents; especially useful for francophone audiences.
Spanish	Review regional vocabulary and formal/informal tone.
Chinese	Check names, punctuation and specialist vocabulary carefully.
German	Review compound terms and sentence length for readability.

If the translation button does nothing, reload the page, choose the language again and retry. If only some text changes, treat that as a translation limitation rather than assuming the project data itself has been rewritten.

8. Account settings, themes and account safety

Theme: light or dark

The public interface shows a Dark control. Select it to change the visual theme; if the control changes to Light or otherwise indicates the opposite mode, select it again to switch back. Theme affects appearance, not whether a project is public or private. On a phone or small screen, look near the top navigation or menu.

Password changes and recovery

Use the Forgot your password? option on the Log in page if you cannot sign in. If the signed-in account settings include a password-change option, follow the instructions there and confirm any required email. Use a unique password that you do not use on another site. A password manager can help you store it safely.

Email confirmation and account access

If the system says your email is not confirmed, use the confirmation link from your inbox or the Resend confirmation email option on the Log in page. If you have multiple email addresses, use the one you registered with.

Account deletion

Account deletion is a serious, potentially irreversible action. The public pages reviewed for this manual do not expose a verified account-deletion control, so this guide will not invent a button or promise a self-service deletion flow. If your signed-in settings provide Delete account, read the confirmation carefully and save any information you need first. If no such option is visible, use the site's official support/contact route if one is provided and request guidance. Do not share your password in a deletion request.

Privacy and security checklist

• Use a password of at least 10 characters, as required by the current registration page.

• Do not share your password or email confirmation link.

• Review project visibility before sending a link publicly.

• Check which profile contact fields are enabled.

• Do not upload confidential documents or client data unless you have permission and understand the audience.

• Sign out on shared or public computers.

• After changing a profile or project, reopen the public view to confirm what visitors can see.

What if you suspect someone else has access?

Reset your password as soon as possible, review public profile and project details, and sign out of shared devices. If the account continues behaving unexpectedly, use the official support route if one is available.

9. Practical examples and everyday workflows

Example A — Add a completed project

Imagine you have completed a reporting dashboard. Gather a project title, a short explanation, your role, an outcome, and a screenshot or public demo link that you are allowed to share.

1. Log in. 2. Open Dashboard. 3. Choose the create-project action. 4. Enter a title such as “Monthly Finance Dashboard”. 5. Describe the problem, your contribution and the outcome. 6. Add a cover image if the form supports it. 7. Set visibility to public only if you are allowed to share it. 8. Save. 9. Open the public project page and check the text and image.

Example B — Organize work for different audiences

You have three kinds of work: client projects, personal experiments and future business ideas.

1. Create catalogues called “Client Work”, “Experiments” and “Future Ventures”. 2. Assign each project to the relevant catalogue. 3. Review the wording of each catalogue so visitors understand the difference. 4. Keep confidential client work private. 5. If one project genuinely fits two categories, assign it to both if the interface allows multiple assignments.

Example C — Prepare a public profile

1. Open Profile while signed in. 2. Write a short professional biography. 3. Add a profile photo if you want one and the form offers it. 4. Choose whether country, phone or contact email should be public using the available sharing controls. 5. Save. 6. Open the public profile in a signed-out window and inspect it from a visitor's point of view.

Example D — Share one project safely

1. Open the project. 2. Check whether it is public or private. 3. If it is meant to be public, confirm that you have permission to publish it. 4. Copy the address of the public page. 5. Open that address in a signed-out window. 6. Send the link only after you confirm that the correct information is visible.

Example E — Prepare an international-facing page

1. Open the page you want to present. 2. Choose a language using Page language. 3. Select Translate page. 4. Read the translated text. 5. Check project names and key professional terms. 6. If the project description remains in the original language, prepare a reviewed translation separately if possible. 7. Share the correct page link.

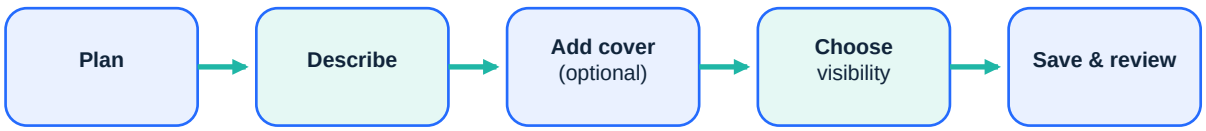

Example F — Fix a project that does not appear in Discover

1. Open the project in your dashboard. 2. Check its visibility setting. 3. If it is intended to be public, change the setting using the available control and save. 4. Reopen the project and check the saved setting. 5. Refresh Discover and look again. 6. If it still does not appear, check whether it is assigned to a public-facing catalogue if the interface requires that, then try again. Never make confidential work public just to test visibility.

10. Troubleshooting and good habits

What you see	What to try
Dashboard or Profile redirects to Log in	Sign in with the account that owns the work, then open the page again.
Confirmation email missing	Check the address, Spam/Junk and Promotions folders; use Resend confirmation email if shown.
Password not accepted	Check for typing errors and keyboard layout; use Forgot your password? if needed.
Project changes do not appear	Confirm you selected Save/Update, wait for success feedback, then refresh and reopen the project.
Cover image does not upload	Try a smaller image in an accepted format; check your connection and retry.
Project not visible on Discover	Check that the project is public and saved; refresh Discover and verify the public view.
Contact detail is visible unexpectedly	Open profile settings, switch off that field's public-sharing option, save and verify the public profile again.
Translation seems incomplete	Choose the language again, select Translate page, and review text that may not be translated automatically.
Catalogue deletion warning appears	Pause and read it. Cancel if you are unsure; confirm only after understanding what will be removed.

A simple rule: save, refresh, verify

Whenever you edit something important, save it, refresh or reopen it, and verify the result. For privacy-sensitive changes, verify from the public visitor's view as well.

Good habits that make your library stronger

- Keep descriptions accurate, specific and easy to scan.
- Label work honestly: completed, in progress, or planned—where the interface allows.
- Update broken links and outdated project images.
- Review public visibility whenever a project changes.
- Use catalogues to guide visitors rather than creating a long, confusing list.

11. Introducing PROJORA to the public

Use this short script when presenting PROJORA to a colleague, professional group, potential user or online audience. It is written to sound natural when spoken aloud.

Presentation script (about 60–90 seconds)

"Have you ever completed a project, learned a new skill or built something useful—but later struggled to show people what you have done? Your work might be scattered across links, folders, screenshots and old documents. It can be difficult for someone else to see the full story.

PROJORA was created to give your work a home. It is a professional project library where you can organize projects, group them into catalogues, and present the story behind your work in one place.

You can use it to showcase completed projects, share work in progress, and keep future ideas organized. Your profile helps introduce you, while project visibility and profile contact-sharing controls help you decide what you want to make public.

Whether you are a student, a professional, a freelancer, a creator or an entrepreneur, PROJORA can help you make your work easier to understand and explore. Instead of simply saying what you can do, you can guide people toward examples of what you have done.

Visit projora-library.netlify.app and start building your project library. Every project deserves a clear story—and PROJORA helps you bring those stories together."

Short version for a social post

Your work deserves a home. PROJORA helps you organize projects, group them into catalogues, and present your professional story in one shareable space. Showcase selected work, keep your projects organized, and help people discover what you do. Start here: projora-library.netlify.app

Simple live demonstration outline

1. Open the homepage and explain the purpose. 2. Show Discover and explain that it is for public projects. 3. Sign in and show the dashboard. 4. Open one sample project and explain its title, description, image and visibility. 5. Show how catalogues group related work. 6. Open the profile and explain public contact controls. 7. Show the language and theme controls. 8. End by inviting the audience to create an account.

Demonstration safety note: use sample information and projects you are allowed to show. Do not display passwords, private client work, unpublished plans or personal contact details that you did not intend to share.

12. Quick reference checklist

First-time setup

- ■ Create an account using your professional name and email.
- ■ Confirm your email address.
- ■ Log in successfully.
- ■ Complete your profile and save it.
- ■ Review optional contact-sharing settings.

Before publishing a project

- ■ Title and description are clear and accurate.
- ■ Cover image and links work, if provided.
- ■ No confidential or unauthorized information is included.
- ■ Visibility is set intentionally.
- ■ Public page has been checked from a visitor's point of view.

Before sharing your profile

- ■ Biography and name are correct.
- ■ Public projects are appropriate for the intended audience.
- ■ Contact-sharing settings are correct.
- ■ Public profile link—not the private editing page—has been copied.

Before deleting a catalogue or changing account settings

- ■ Read the confirmation message.
- ■ Understand what information or relationships may be removed.
- ■ Cancel if the effect is unclear and check before proceeding.

Official site and final reminder

PROJORA live site: https://projora-library.netlify.app

This manual is a user guide, not a guarantee that every screen or label will remain unchanged. The site may evolve. Follow the messages shown in your current interface, especially for privacy, deletion, password and confirmation actions. When in doubt, pause before making a change that could expose or remove information.

PROJORA — Every project. One clear story.
