MG-FINTECH

User Manual & Company Introduction Guide

Product: MG-FINTECH – Financial Intelligence and Business Management Web Application

Website: https://mgc-fintech.netlify.app/

Document: User Guide and Introduction Manual

Audience: Business owners, entrepreneurs, retailers, SMEs, companies, administrators and staff.

1. Welcome to MG-FINTECH

Welcome to **MG-FINTECH**, a financial intelligence and business management web application designed to help businesses organize their daily operations, manage important business records and monitor their financial activities from one digital workspace.

Many businesses struggle with keeping accurate records of customers, sales, payments, inventory, purchases and financial transactions. Managing these activities through notebooks, spreadsheets and disconnected systems can make it difficult to understand the true position of a business.

MG-FINTECH brings important business management activities together in one web application.

It provides a centralized workspace where authorized users can manage business information, record transactions, monitor stock, manage sales and payments, download business data and upload supported data files.

Whether you operate a small shop, a growing enterprise or an established company, MG-FINTECH is designed to support more organized business management.

2. What MG-FINTECH Helps You Do

MG-FINTECH provides tools to help businesses:

- Maintain customer records.
- Register and manage products.
- Monitor available inventory and stock levels.
- Record business sales.
- Generate and manage sales invoices.
- Record full or partial customer payments.
- Record inventory purchases.
- Monitor financial transactions.
- Review business and financial activity through the dashboard.
- Download business data for record-keeping and external use.
- Upload supported data into the application.
- Manage business data through the Settings section.

The application helps reduce dependence on scattered manual records and makes important business information easier to access.

3. Who Can Use MG-FINTECH?

MG-FINTECH is suitable for:

Small and medium-sized businesses

- Retail shops
- Wholesale businesses
- Distributors
- Trading businesses
- General merchants

Growing companies

- Businesses with multiple customers and products
- Companies that need better sales and inventory records
- Businesses seeking improved financial visibility

Business owners and management

- Entrepreneurs
- Shop owners
- Company directors
- Business managers

Authorized staff

- Sales personnel
- Inventory personnel
- Administrative staff
- Other employees authorized to use the company's account

4. Getting Started

4.1 Accessing the Web Application

MG-FINTECH is accessible through a web browser. Visit: **https://mgc-fintech.netlify.app/**

You do not need to install a traditional desktop application to access the hosted web application. For convenient access, you may bookmark the website in your browser.

4.2 Signing In

1. Open the MG-FINTECH website.
2. Locate the login section.
3. Enter your registered login credentials.
4. Submit the login form.
5. After successful authentication, access your business workspace.

Only authorized users should access a company's account.

4.3 Signing Out

When you finish using the application:

1. Locate the account or sign-out option.

2. Select Sign Out.
3. Confirm that you have returned to the login screen.

Always sign out when using a shared or public computer.

5. Understanding the Main Sections

5.1 Dashboard

The Dashboard provides an overview of business activity. It is intended to help users understand important business information without having to open every individual section. Depending on the available dashboard information, users can review financial and operational summaries and recent activity.

Why it matters: The dashboard gives business owners and managers a convenient starting point for monitoring business operations.

5.2 Customers

The Customers section is used to maintain customer information. Businesses can use this section to:

- Register new customers.
- View existing customer records.
- Maintain customer information.
- Identify customers when preparing sales.
- Keep customer information organized.

> **Recommended practice:** Register customers using accurate names and contact information. Check existing records before creating duplicates.

5.3 Products

The Products section helps businesses maintain their product catalogue. Users can register and manage product information, including supported details such as:

- Product name.

- Product identification or SKU.
- Selling price.
- Opening stock quantity.
- Low-stock threshold.

A properly maintained product catalogue makes it easier to prepare sales and monitor inventory.

> **Recommended practice:** Give each product a clear name and, where appropriate, a unique SKU.

5.4 Inventory

The Inventory section helps users monitor stock quantities. When a confirmed sale is recorded, the relevant product stock is reduced automatically. When an inventory purchase is recorded, the relevant stock quantity is increased. The system also supports low-stock monitoring using product stock thresholds.

Why it matters:

- Helps users monitor available stock.
- Makes stock movements easier to track.
- Helps identify products that need replenishment.
- Reduces the risk of relying entirely on manual stock calculations.

> **Recommended practice:** Keep product quantities accurate and record purchases and sales promptly.

5.5 Sales

The Sales section is used to record and manage customer sales. A typical sales process involves:

1. Opening the Sales section.
2. Starting a new sale.
3. Selecting the customer, where applicable.
4. Selecting the products being purchased.
5. Entering the required quantities.
6. Reviewing the sale total.

7. Recording the initial payment, if applicable.
8. Confirming the sale.

After a sale is successfully confirmed, the system records the sale and its associated information. The sale also updates the relevant inventory quantity.

> **Important:** Review the customer, products, quantities and total before confirming a sale.

5.6 Sales Invoices

MG-FINTECH supports sales invoice management. An invoice provides a record of a customer's purchase and the amount payable. Invoices can reflect whether a sale is:

- Paid.
- Partially paid.
- Still outstanding.

An invoice is particularly useful when a customer pays in instalments or makes more than one payment.

> **Recommended practice:** Always check the invoice balance before requesting another payment.

5.7 Recording Customer Payments

MG-FINTECH supports recording payments against sales. For example, a customer purchases products worth 200 XOF and initially pays 100 XOF. The system records:

- Sale total: 200 XOF.
- Amount paid: 100 XOF.
- Outstanding balance: 100 XOF.
- Payment status: Partially paid.

When the customer later pays the remaining 100 XOF, the user records the second payment against the invoice. The system then updates the payment information:

- Sale total: 200 XOF.
- Total paid: 200 XOF.
- Outstanding balance: 0 XOF.

- Payment status: Paid.

The corresponding income transactions are also recorded in the financial transaction records.

> **Important:** Record the amount actually received. Do not mark an invoice as paid simply because a customer has promised to pay.

5.8 Purchases

The Purchases section supports recording inventory purchases from suppliers. When a business purchases additional stock:

1. Open the Purchases section.
2. Start a new inventory purchase.
3. Select the relevant product.
4. Enter the purchase quantity.
5. Enter the required purchase information.
6. Confirm the purchase.

The inventory quantity is increased following a successful purchase record.

Example: If a business has 18 units of a product and records a purchase of 5 additional units, the resulting stock becomes 23 units.

5.9 Financial Transactions

The Financial Transactions section helps users review recorded financial activity. Business transactions generated through supported operations are recorded in the system. Examples include income generated from recorded customer payments. Users can review transaction records to better understand the financial activity recorded in their business workspace.

> **Important:** Financial transaction records should be reviewed regularly. Users should ensure that the recorded information reflects actual business activity.

5.10 Settings

The Settings section contains important business data management options. One particularly important feature is the ability to clear business records. MG-FINTECH provides two distinct clearing options.

Option A: Clear Financial Transactions Only

This option removes financial transaction records only. It does not remove customer records, product records, inventory quantities, sales records, sales invoices, recorded sales payments, purchase records, stock movement records, or the user's login account.

When to use it: When a business wants to clear its financial transaction history without deleting its operational business records.

Option B: Complete Business Data Reset

This option removes the signed-in user's business records, including financial transactions, customers, products, sales, sales invoice items, sales payments, purchases, stock movements, and audit event records. It does not delete the user's login account.

> **WARNING:** A complete business data reset is a serious action. It removes important business information. Users should only proceed when they understand the consequences and have retained any records they need.

6. Recommended Daily Business Workflow

For better record management, businesses can follow this recommended routine.

1. **Review the Dashboard:** Start the day by reviewing the available business summaries and recent activity.
2. **Register Customers:** Add new customers before recording their sales where customer identification is required.
3. **Maintain the Product Catalogue:** Ensure that products, prices, quantities and stock thresholds are accurate.
4. **Record Sales:** Enter customer purchases accurately and confirm the sale.
5. **Record Payments:** Record payments when money is actually received. Update invoices when customers make additional payments.
6. **Record Inventory Purchases:** Whenever new stock is purchased, record the purchase to update the inventory.
7. **Monitor Financial Activity:** Review financial transaction records and compare them with the business's actual payment records.
8. **Sign Out:** Secure the account after completing daily activities, especially when using a shared device.

7. Best Practices for Business Owners

1. Enter accurate customer information.
2. Register products before recording sales involving those products.
3. Use clear product names and unique SKUs where possible.
4. Review quantities before confirming sales.
5. Record purchases whenever stock is replenished.
6. Record payments only after they have actually been received.
7. Review outstanding invoices regularly.
8. Monitor low-stock alerts.
9. Review financial transactions frequently.
10. Restrict account access to authorized personnel.
11. Avoid sharing login credentials.
12. Understand the implications of data-clearing options before using them.

8. Data Protection and Account Security

MG-FINTECH uses authenticated accounts and user-specific data access controls. The application is configured so that users access their own business records rather than the records of other users.

For better account security:

- Use a strong, private password.
- Do not share login details.
- Sign out on shared computers.
- Do not leave an authenticated account unattended.
- Restrict access to authorized employees.
- Be careful when using the data-clearing options.

9. Common Questions

Q1. Do I need to install MG-FINTECH on my computer?
No traditional desktop installation is required to access the hosted website. You can use a supported web browser.

Q2. Can I register customers?
Yes. The Customers section is provided for maintaining customer records.

Q3. Can I manage products and inventory?
Yes. The platform supports product management, inventory tracking, stock updates and low-stock monitoring.

Q4. Can a customer pay in instalments?
Yes. The payment workflow supports recording an initial payment and subsequent payments against a sale.

Q5. Does recording a sale affect inventory?
Yes. A successfully confirmed sale reduces the stock quantity of the relevant products.

10. Important Operational Guidance

MG-FINTECH is a business management and financial record-keeping platform. The accuracy of the information displayed depends on the accuracy and completeness of the records entered by users.

11. Introducing MG-FINTECH to Your Company

Companies introducing MG-FINTECH can follow a simple phased implementation approach covering Account Setup, Business Information entry, Staff Orientation, Daily Use, and Management Review.

12. Our Commitment to Better Business Management

MG-FINTECH is built around a simple objective: To help businesses manage their operations with greater organization, visibility and control.
